EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mary J. Breiner on January 21, 2010.

The application has been amended as follows:

In the Claims:

Claim 41 has been replaced by the following Claim:

- 41. Method for continuously feeding a web material wound on a reel to a processing machine comprising:
- feeding a first web material at a feed speed from a first reel;
 - carrying in rotation a second reel with a second web material;
 - when the feed speed of the first web material is essentially same as a peripheral speed of the second reel, joining the first web material to the second web material and interrupting the first web material upstream of a splicing area between the first web material and the second web material; wherein an initial free end of the second web material is held adherent to the second reel, until splicing of the first web material and the second web material, by at least one mechanical member which rotates with said second

Art Unit: 3654

reel; wherein each of said first reel and said second reel has one of said at least one mechanical member associated therewith; and wherein said at least one mechanical member is torsionally connected with a respective support of said second reel until said joining of the first web material to the second web material; and said at least one mechanical member is torsionally disconnected from said respective support during splicing; and carrying said at least one mechanical member to a neutral position after said splicing which does not interfere with unwinding of a new reel.--

Claim 58 has been replaced by the following Claim:

-- 58. An unwinding device for unwinding reels of web material comprising:

- a rotating element with supports for at least two

reels;

- a splicing member to join a first web material coming from an expiring reel to an initial free end of a second web material wound on a new reel;

-at least one mechanical member associated with each of said supports, to retain the initial free end of the new reel disposed on a respective one of said supports;

- wherein each mechanical member comprises an elastic element having one a first end fixed to the respective one of said supports and a second end reversibly connectable to the respective one of said supports by a hooking member associated with the respective one of the supports so that said elastic element is under tension when said second end is connected to the respective end of one of said supports, said hooking member cooperating with an actuator which controls release of the elastic element when the initial free end of the second web material is to be joined to the first web material,

Art Unit: 3654

wherein said actuator disengages said second end of said elastic element upon said splicing member joining said first web material to said initial free end of said second web material whereupon said tension in said elastic element is released causing withdrawal of said elastic element from an area in which web material is fed and consequent release of the initial free end.--
